

Micro Channel COMPATIBLE PERIPHERALS FAMILY

High Performance/High Integration/100% Compatibility

- **Total Solution ... High Integration VLSI Components Implement Complete Micro Channel Compatible Motherboards**
- **Single Architectural Solution for 80386 and 80386SX Systems**
- **High Performance**
 - 80386 Systems to 25 MHz
 - Up to 16 MB of Zero Wait State Page-Interleaved DRAM
 - Interface to Industry Standard 82385 Cache Controller for Maximum Performance Memory Design
- **100% Compatible at All Levels**
 - Architecture Compatible
 - Register Level Compatible
 - Compatible with All Micro Channel Bus Timing and Drive Characteristics
- **High Integration ... Two Chip Sets to Choose from, 82310 and More Highly Integrated 82311**
- **82310 Chip Set Includes:**
 - 82306 Local Channel Support Chip
 - 82307 DMA Controller/Central Arbiter
 - 82308 Micro Channel Bus Controller
 - 82309 Address Bus Controller
 - 82706 VGA Graphics Controller
- **82311 Chip Set Includes:**
 - 82303 and 82304 Local I/O Channel Support Chips
 - 82307 DMA Controller/Central Arbiter
 - 82308 Micro Channel Bus Controller
 - 82309 Address Bus Controller
 - 82706 VGA Graphics Controller
 - 82077 Floppy Disk Controller

Intel's Micro Channel Peripheral Family consists of two chip sets, either of which can be used to build a high performance, 100% Micro Channel compatible motherboard. The two chip sets differ primarily in their implementation of the motherboard peripheral bus. The 82310 Chip Set supports either the 8272A or 82072 Floppy Disk Controller. The 82311 Chip Set features a more highly integrated peripheral bus, and includes the 82077 Single Chip Floppy Disk Controller. (The 82311 chip set does not support the 8272A or 82072.) Both chip sets support 80386 systems up to 25 MHz and 80386SX 16 MHz systems.

The following pages describe Intel's Micro Channel Peripheral Family. The first section presents an overview of the 82310 and 82311 chip sets, and discusses system issues such as clock requirements and Micro Channel interface logic. Following this are the individual component descriptions and specifications.

	82310 Chip Set	82311 Chip Set
82303 Local I/O Support Chip		✓
82304 Local I/O Support Chip		✓
82306 Local Channel Support Chip	✓	
82307 DMA/Micro Channel Arbitration Controller	✓	✓
82308 Micro Channel Bus Controller	✓	✓
82309 Address Bus Controller	✓	✓
82706 VGA Graphics Controller	✓	✓
82077 Floppy Disk Controller		✓

Figure 1. Micro Channel Peripheral Family

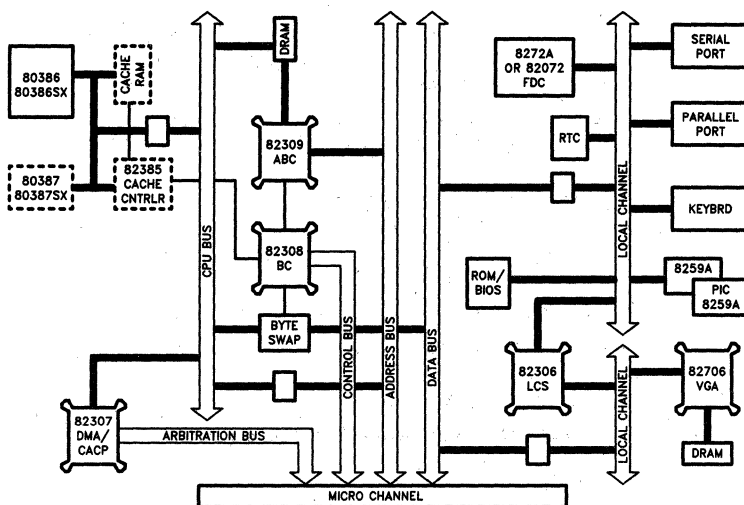

82310 Micro Channel COMPATIBLE PERIPHERAL CHIP SET

- Highly Integrated VLSI Components to Implement Micro Channel™ Compatible Motherboard
- Single Architectural Solution for 80386 16 MHz, 20 MHz and 25 MHz systems, and 80386SX 16 MHz Systems
- Full Compatibility with IBM Micro Channel Architecture
- Zero-Wait State Performance
- Cache Interface (82385) for Highest Performance Compatible System Implementation with 80386
- Supports up to 16 MB of Memory on Motherboard
— Extended Memory for OS/2 Support
- 100% IBM Compatible VGA Graphics
- Flexible Memory Architecture Support
— Up to 4 Banks of Interleaved Page Memory
— 256K, 1M, 4M DRAM Support
- Multiple Floppy Disk Controller Interface to Support 3½" and 5¼" Disk Drives
- Keyboard and BIOS Support from 3rd Party
- Numeric Coprocessor(s) Interface (80387, 80387SX)
- Surface Mount Packaging for Small Footprint Design (0.025" Pitch)
- Low Power CHMOS Technology
- Available in 100 & 132-Pin Plastic Quad Flat Pack Packages.

(See Packaging Spec. # 231369)

Intel's peripheral chip family is designed to support the new generation of Micro Channel compatible systems. Intel's Micro Channel compatible peripheral solution consists of highly integrated VLSI components designed to support 80386 systems up to 25 MHz, as well as 16 MHz 80386SX systems.

The Intel solution is based on the high performance IBM Model 80 register model but it is highly integrated to provide full compatibility across all models. The specifications for 82310 VLSI components conform to architectural specifications defined for the Micro Channel Bus Architecture. The VLSI components are implemented in 1.5 micron CHMOS technology and packaged in space saving surface mount JEDEC flat pack packages.

290167-1

INTRODUCTION

The new generation of Personal Computer systems from IBM offers significant technological advantages over the PC/AT and XT systems. The most significant advancement is in the *Architectural* definition of the bus—Micro Channel Bus. Unlike the AT bus, the Micro Channel is well defined in terms of bus protocol timings. To create a compatible Micro Channel system requires adherence to the Micro Channel timings and electrical drive characteristics.

All IBM Micro Channel models have increased system functionality included on the motherboard. In the older PC/AT architecture, such functionality required the addition of peripheral cards. Specific features added to the motherboard include the Serial Port, Bi-directional Parallel Port and Video Graphics Control.

Micro Channel ARCHITECTURE

The Micro Channel Bus is defined to support an open architecture providing Multi-Master capability, Multi-Device arbitration with fairness, arbitration capability and easy configurability of the total system (Programmable Option Select-POS). Providing full details about the Micro Channel Bus Architecture is beyond the scope of this document. Please refer to IBM Technical Reference Manuals on Micro Channel systems.

To provide Multi-Master capability as defined in the Micro Channel Architecture, each Master device is responsible for driving the Address, Data, arbitration and control signals. For operation reliability and compatibility there are significant constraints in terms of timing and drive levels. These constraints are well documented in IBM's Technical Reference Manual for Micro Channel systems. Intel's chip set is designed to meet the Micro Channel timings.

The Micro Channel has four modes of Memory and I/O Bus cycles. These are Default cycle, Synchronous Extended cycle, Asynchronous Extended cycle and Matched Memory cycle. Each of these bus cycles is supported by the Intel Peripheral chip set.

COMPATIBILITY METRICS

The Intel chip set provides full compatibility with the IBM Micro Channel solution. All Bus cycles comply with the Micro Channel timings. Selection of buffers for drive level with minimum delays to meet Micro Channel timings are specified in the Intel *Designers Guide for Micro Channel Compatible Implementation*.

MEMORY PERFORMANCE

With the Intel chip set, Micro Channel compatible motherboards can be designed to provide zero-wait performance. Performance is predicated on memory design and DRAM speed selection. The Intel chip set offers flexible memory design support to meet various cost/performance goals.

SYSTEM CONSIDERATIONS

System Components

82306	Local Channel Support Chip
82307	DMA/CACP Controller
82308	Micro Channel Bus Controller
82309	Address Bus Controller
82706	VGA Graphics Controller

Note that the above part names/numbers are frequency independent; i.e., they refer to a generic functional VLSI device. To actually implement for example, a 20 MHz system, however requires an 82310-20 Chip Set as opposed to an 82310-16 Chip Set. The 25 MHz version of the 82308 (dubbed the 82308HS-25) cannot be used at 16 MHz or 20 MHz.

To implement a minimum configuration Micro Channel compatible motherboard, each of the five system components listed above are required in addition to the following components:

- 80386 or 80386SX Microprocessor
- TTL/CMOS Buffers for Various Buses in the System
- 8742 Keyboard Controller with Firmware for 101 and 102 Keyboard Interface
- 8272A or 82072 for Floppy Disk Controller
 - 8272A Required to Maintain IBM Look-Alike Motherboard with 3½" Drive Support
 - 82072 for PS/2 Compatible 3½" and AT Compatible 5¼" Disk Drive Interface
- Battery-Backed Real Time Clock with CMOS RAM
- Serial Port
- Parallel Port
- Programmable Interrupt Controllers (Two 8259s)
- Memory
 - ROM BIOS
 - DRAMs for Main Memory
 - DRAMs for VGA
- System Clock Sources
- Mechanical Connectors/Components

The Intel solution is supported by a fully compatible BIOS firmware from a third-party vendor.

its own clock requirements, this section describes the synchronous relationship that exists between them. (Note that several other clocks exist in a Micro Channel system. However, this section describes only those clocks that are synchronously related to the CPU clock.)

82310 CHIP SET SYSTEM CLOCK REQUIREMENTS

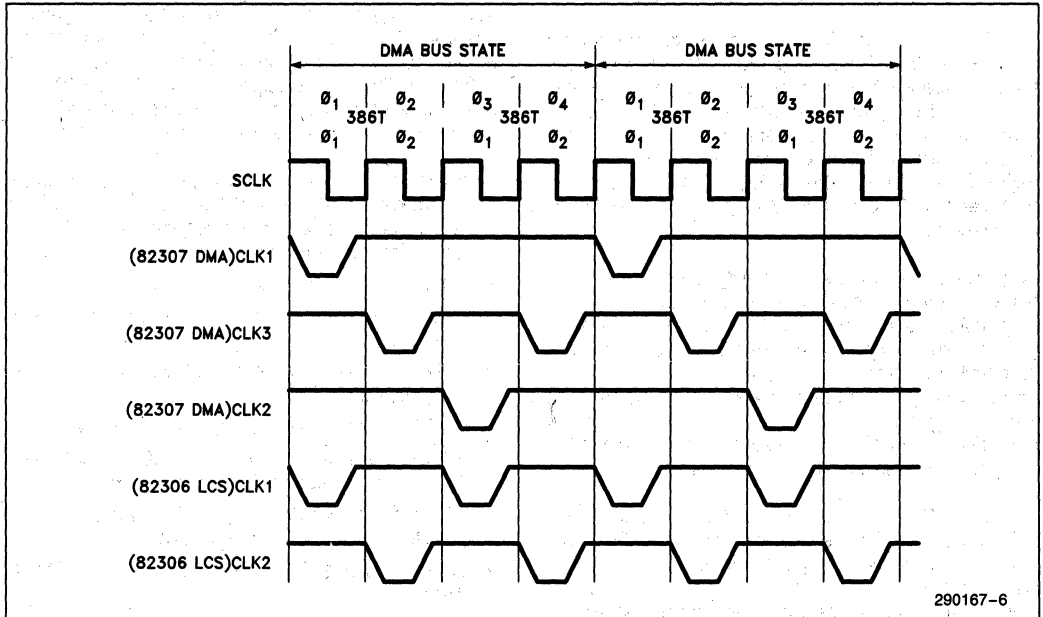

- Introduction
- Clock Definitions
- Clock Requirements

INTRODUCTION

This section describes the basic clocking scheme of the host CPU (80386 or 80386SX), LCS (82306), DMA (82307), BC (82308) and ABC (82309). Although each component spec individually describes

The clocking scheme essentially divides the DMA bus state into four phases as depicted in the figure. Note that there is a direct 2-to-1 mapping of 80386 state to DMA state. The DMA (82307) and LCS (82306) comprehend phases by inputting distinct, active low, non-overlapping clock phases. The Address Bus Controller and Bus Controller learn the system phase by synchronously sampling the falling edge of RESET, as described in the component specifications.

BASIC FOUR-PHASE CLOCKING REQUIREMENT

CLOCK CIRCUIT DEFINITION

SYSTEM CLOCK REQUIREMENTS

Symbol	Parameter	Kit 16 MHz		Kit 20 MHz		Kit 25 MHz		Notes
		Min	Max	Min	Max	Min	Max	
T1	SCLK High Time (90%)	8		6.5		5.5		
T2	SCLK Low Time (10%)	8		6.5		5.5		
T3	SCLK High Time (50%)	12		10		9		1
T4	SCLK Low Time (50%)	12		10		9		1
T5	SCLK Rise Time		3.5		3.5		3.5	
T6	SCLK Fall Time		3.5		3.5		3.5	
T7	SCLK-To-DMACLK(N) Skew	-2	3	-2	3	-2	3	2
T8	DMACLK(N) Rise Time		2		2		2	
T9	DMACLK(N) Fall Time		2		2		2	
T10	SCLK Period							
T11	DMACLK-To-DMACLK Skew	-2	2	-2	2	-2	2	2
T12	DMACLK Low Time		15		15		12	
T13	DMACLK Non-Overlap Time		4		4		2	

NOTES:

1. Needed to enforce a duty cycle between 40% and 60%. (45% and 55% at 25 MHz.)
2. Limiting skew to this level is recommended.
